1. 【简答题】当成绩大于等于90分，打印优；大于等于80分，打印良；大于等于70分，打印中；大于等于60分，打印差；否则打印不及格

得分：94/100

学生答案：x = 50

```
if x >= 90 :
    print("优")

elif x >= 80 :
    print("良")
elif 80 > x and x >= 70 :
    print("中")
elif x >= 60:
    print("差")
```

The screenshot shows a Python IDE with a project named 'pythonProject'. The code in the editor is as follows:

```
1 x = 50
2
3 if x >= 90:
4     print("优")
5
6 elif x >= 80:
7     print("良")
8 elif 80 > x and x >= 70:
9     print("中")
10 elif x >= 60:
11     print("差")
```

The variable 'x' is assigned the value 50. The program output in the Run console shows 'Process finished with exit code 0', indicating successful execution. The status bar at the bottom indicates the current line is 11:59, column 4, with a Python 3.10 interpreter.
