1. 【简答题】Vue穿梭框

得分 : 100/100

学生答案 : <template>
 <div style="text-align:center">
 methods:{
 <el-transfer
 saveO)[保存值
 style="text-align: left; display: inline-block"
 //console.log(this.handleSelectedValue);//这里自动的书
 v-model="handleSelectedvalue"
 this.handleSelectedvalue.forEach((id)->{
 : props="prop"
 alert(id);
 :data="rolePool"
 3)
 :titles=["待选角色','已选角色"]
],
 : button-texts=["左移','右移"]
 getData(){从数据库this.rolePool=[
 <el-button class="transfer -footer" flot="left-footer"size= "small" @click="save()">保存</el-button>
 (id:1,username:'测试13,
 <el-button class="transfer-footer" slot="right-footer" size="small" @click="reset()">重置</el-button
 {id:2,username:'测试2',3,
 </el-transfer>
 (id:3,username:'测试3',
 </div>
];
 </template>
],
 <script>
 resetO{
 export default {
 this.rolePool=[];
 data(){
 this.handleSelectedvalue=[];
 return {
 this.getDataO;
 arr:[],prop: (key: 'id'|label: "usern

 created rolePool:[{id:1,username:'测试1',{id:2,username:'测试2'},{id:3,username: "测试3"}],
 this.getData();
 出不来 rolePool[i]:use:→—
 (/
 handleSelectedValue:[]
 </script>
 }

参考答案 : Vue穿梭框
