1. 【简答题】

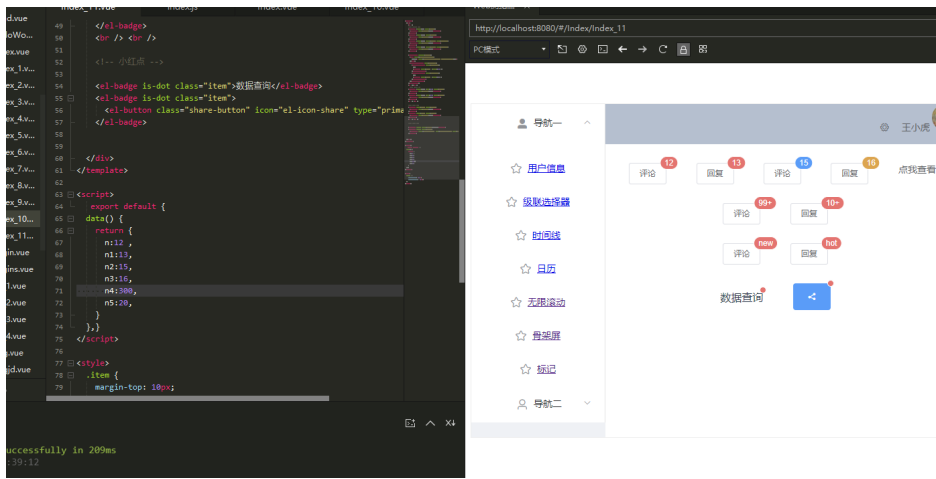

得分：100/100

完成星的功能

学生答案：

The student's answer consists of two parts. The first part shows a code snippet for an infinite scroll component using the `infinite-scroll` library. The code includes a `template` section with `infinite-scroll="load"` and `infinite-scroll-disabled="disabled"` attributes, and a `script` section with a `data` object containing `count: 10` and `loading: false`. The second part shows a browser screenshot of the application running at `http://localhost:8080/#/index/index_9`. The browser displays a list of items with a 'no more' message at the bottom. The third part shows another code snippet for a user profile component, and a browser screenshot of the application running at `http://localhost:8080/#/index/index_10`. The browser displays a user profile page with a 'refresh' button and a photo of a deer.
